James Opstad

Reference score

Eluvium for clarinet and resonating tam-tam (2018)

Technical Requirements

1x tablet (iPad/iPad Pro or similar)
1x macOS/Windows/Linux computer with SuperCollider installed
1x audio interface with a minimum of 2 microphone inputs and outputs
1x contact microphone (Jez Riley French C-series or similar) with impedance adaptor
1x cardioid condenser microphone (AKG 414 or similar)
1x speaker (Genelec 8030 or similar)

Electronics Setup

Position the condenser microphone to capture the clarinet. Attach the contact microphone to the front of the tam-tam. Place the speaker behind the tam-tam. Connect both microphones and the speaker to the audio interface.

The exact positioning of the contact microphone and speaker will have a significant impact on the resulting timbre. Each tam-tam is different and time should be reserved for experimentation prior to performance. It may be necessary to reduce the level of dominant frequencies in order to achieve a more varied spectrum. It is therefore recommended to use an EQ on the contact microphone input. The input and output levels are automatically regulated and should not be adjusted during performance.

Score Viewer

This piece uses a specially designed score-reading application to trigger the electronics and assist with the performance of changing tempi. A printed score is provided for reference but the score viewer must be used in performance.

Tempi

The top metronome mark at the start of the score indicates the base tempo. All other tempi are relative to this value.

Metronome marks for individual tempi are expressed as ratios. These indicate the relationship between the new tempo and the base tempo. In the score viewer these ratios are replaced by literal metronome marks in beats per minute.
